

Mass spectrometric services

at the Department of Biotechnology

The Department of Biotechnology offers a broad spectrum of mass spectrometric services with flexible solutions to your individual project.

Our equipment:

QSTAR hybrid pulsar *i*:

- Quadrupole time-of-flight
- ESI-MS(/MS), μ HPLC and on-line nanospray-MS
- MALDI-MS(/MS)

The QSTAR mass spectrometer is specialized for medium-throughput sequencing of biopolymers and offers excellent mass accuracy and resolution. Available at the Department of Biotechnology are experienced mass spectrometrists ready to provide quality data concerning:

Protein identification and characterization
Protein digestion
Nucleic acid analysis
Fatty acid analysis
LMW-compound determination and quantification
